

We, the participants of the **Energy Transition Summit** held in Ceará on November 28-29, 2024, gathered to address the challenges and explore the opportunities of transitioning to a sustainable energy future, declare the following:

We recognize that:

1. The climate emergency demands immediate action to reduce greenhouse gas emissions and limit global temperature increases, in line with the goals of the Paris Agreement.
2. The energy transition is essential to promote sustainable, inclusive, and resilient economic development, benefiting all communities, especially the most vulnerable.
3. Technological innovation and investment in renewable energies, including emerging solutions like green hydrogen, are key drivers for advancing towards cleaner and more efficient energy systems.
4. International and regional collaboration is vital to share knowledge, resources, and experiences that accelerate the adoption of sustainable energy solutions and the diversification of energy sources.

We commit to:

1. **Promoting renewable energy:** Driving the development and implementation of clean energy sources such as solar, wind, hydroelectric, and biomass, while exploring the strategic potential of technologies like green hydrogen.
2. **Fostering energy efficiency:** Implementing practices and technologies to optimize energy use across sectors, reducing waste and improving productivity.
3. **Supporting innovation and education:** Investing in research, development, and professional training to create green jobs and expand access to advanced technologies.
4. **Ensuring a just transition:** Ensuring that the shift to sustainable energy is inclusive and equitable, providing support and opportunities for affected communities and workers.
5. **Establishing comprehensive policies:** Collaborating with governments and policymakers to create regulatory frameworks that facilitate investments in sustainable energy infrastructure, including green hydrogen.
6. **Strengthening regional cooperation:** Working closely with neighboring countries and international organizations to address common challenges and enhance shared initiatives in the energy transition.

We call on:

- **Governments** to set ambitious goals and clear policies that encourage energy transition and protect the environment.
- **The private sector** to invest in clean technologies and adopt sustainable practices, exploring innovative solutions like green hydrogen.
- **Financial institutions** to increase funding for renewable energy and energy efficiency projects.
- **Civil society and local communities** to actively participate in decision-making and promote sustainable practices in their areas.
- **International organizations** to support and facilitate global collaboration and knowledge exchange.

Conclusion

The energy transition is a shared responsibility and a unique opportunity to build a more sustainable, equitable, and resilient future. With the support of technological innovation and emerging solutions like green hydrogen, we can address the climate and economic challenges of our time. United in purpose and action, we will transform our economies for the benefit of current and future generations.
